Product description:

FENZI G7 IRON TANK FOR DIESEL FUEL 250LT

The FENZI F7 Iron Tank for Diesel Fuel 250LT is a product of the highest quality and safety, specifically designed for the transport of dangerous and flammable liquids, such as diesel fuel. Made from carbon steel EN 10025 S235JR, the FENZI G7 ensures strength and durability over time, complying with the strictest European regulations.

The FENZI F7 Tank model is approved by the Ministry of Infrastructure and Transport in accordance with the ADR agreement, certifying its suitability for the transport of hazardous materials. Each individual tank undergoes rigorous testing by the competent authority to ensure that each piece meets the required safety standards.

One of the distinguishing features of the FENZI F7 Tank is the presence of a special double-acting safety valve.

This valve prevents product leakage even in the event of vehicle rollover, providing additional protection during transport. Furthermore, to facilitate vehicle refueling operations, the FENZI G7 can be equipped with a pump with a related hose and nozzle.

Its cylindrical shape is enclosed within a metal parallelepiped structure. The FENZI G7 is designed with an external coating that offers anti-corrosion protection, ensuring long-lasting durability even in harsh environmental conditions.

The FENZI F7 Tank is also equipped with a fusible plug and an inspection flange, allowing easy access for

maintenance and internal inspection. The baffle plates, present in models of higher capacity, help to slow down the inertia force of the liquid during transport, although this specific model has a capacity of 250 liters.

Models:

-G7 F45/12

-G7 F70/12

The only differences between the G7 F45/12 and G7 F70/12 models are the power ratings, with the F45 offering a lower power output and the F70 designed to provide greater power, thus meeting different usage needs depending on the type of operation, while always guaranteeing the high quality and reliability typical of FENZI products.

Additional features include lifting eyes and bottom lifting points, which facilitate tank handling operations.

The interlocking system for stacking multiple units allows for efficient use of space, especially during transport or storage. Each tank is equipped with an identification plate and is supplied with an instruction and maintenance manual, as well as the certifying authority's certificate attesting to the product's compliance.

The FENZI F7 Iron Tank for Diesel Fuel 250LT represents an excellent choice for those who need a safe, durable, and compliant container for the transport of diesel fuel. The combination of high-quality materials, precise design, and advanced safety systems makes the FENZI F7 a reliable and long-lasting product for fuel transport needs.

Technical specifications of FENZI G7:

Capacity: 250 liters

Width: 800 mm

Length: 1090 mm

Height: 1000 mm

Weight: 135 kg
