Product description:

TELECO VOYAGER G385 SATELLITE ANTENNA 85cm

TELECO VOYAGER G385 is a manual satellite antenna equipped with a graduated scale on the mast that allows you to set the dish's pointing angle quickly and precisely, while staying inside the vehicle.

To correctly set the inclination of the TELECO VOYAGER G385, it is essential that the vehicle is well leveled (in bubble). If not, you must adjust the dish's inclination value to account for the vehicle's unevenness.

Once the inclination is set, simply point the TELECO VOYAGER G385 southward using the internal mast and, while observing the television, optimize the alignment.

The satellite antenna TELECO VOYAGER G385 has transmission capabilities managed by the geostationary satellite at 13 degrees East, which ensures a wide coverage area originating from Central Europe.

TELECO VOYAGER G385 Satellite Antenna has a directly proportional correlation between its diameter and the signal strength at the edges of the "footprint."

It is generally not recommended to install an excessively large diameter antenna on a camper, which is why the standard is around 80 cm in diameter.

Thanks to the satellite antenna, the coverage is very wide, starting from Central Europe. The signal degrades as you move further from Central Europe. As seen in the map, with the TELECO satellite antenna, you can receive the HotBird signal (which broadcasts SKY and TIVUSAT) throughout most of Europe, northern Morocco, Algeria, and Tunisia, providing satellite coverage wherever you choose to stay.

Technical features of the TELECO VOYAGER G385:

Orientation type: Manual

Mount type: Wall bracket

Antenna diameter: 850 mm

Length: 850 mm

Width: 40 mm

Height: 850 mm

Weight: 11.40 kg
